

Personal information

| | |
|-------------------------|--|
| Name | Nicola Vianello |
| Date and Place of birth | 14 August 1975, Venice, Italy |
| Citizenship | Italian |
| Address (Switzerland) | Rue du Centre 54, St. Sulpice, VD, Switzerland |
| Address (Italy) | Via dei Giacinti 28, 35126 Padova, Italy |
| Work Address | Swiss Plasma Centre, EPFL, PPB 213, Station 13 CH-1015 Lausanne, Switzerland |
| ORCID ID | 0000-003-4401-5346 |
| ResearcherID | B-6323-2008 |
| Google Scholar | Google scholar |

Education

| | |
|--------------|---|
| 1993 | High School Leaving Certificate , Liceo Scientifico Statale <i>U.Morin</i> , Venice Italy. Grade: 56/60 |
| 1999 | M. Sci. Physics , <i>Università degli Studi di Padova</i> . Grade: 110/110 cum Laude |
| Thesis Title | <i>Trasporto di particelle ed energia per effetto di turbolenza elettrostatica in plasmi confinati in configurazione Reversed Field Pinch (Particle and energy transport induced by electrostatic turbulence in Reversed Field Pinch plasmas)</i> |
| advisor | Prof. S. Lo Russo, Dr. V. Antoni |
| 2002 | PhD in Energetics , <i>Università degli Studi di Padova</i> |
| Thesis Title | <i>Self-organization phenomena and coherent structure generation</i> |
| advisor | Prof. A. Buffa, Dr. V. Antoni |

Schools

| | |
|------|--|
| 2000 | <i>International School of Plasma Physics and Ultrafast Optics</i> , Capri, Italy |
| 2001 | <i>5th Carolus Magnus Euro-Summer School on Plasma and Fusion Energy Physics</i> , Badhonnef, Germany |
| 2002 | <i>International School on Topics in Nonlinear Dynamics</i> , Venice, Italy |
| 2011 | <i>5th International Iter Summer School: MHD and Energetic Particles</i> , Aix-en-Provence, France |

Employment

| | |
|-----------|--|
| 1999 | <i>Consorzio RFX, Padova, Italy</i> , Research Fellow |
| 2002–2003 | <i>Consorzio RFX, Padova, Italy</i> , Research Fellow |
| 2003–2009 | <i>Consorzio RFX, Padova, Italy</i> , Research Scientist |
| 2009–2015 | <i>Consiglio Nazionale delle Ricerche</i> , Research permanent staff |
| 2015– | <i>Swiss Plasma Center, Ecole Polytechnique Federale de Lausanne</i> , Scientist |

Experience

| | |
|-----------------------|--|
| March – June 2001 | Visiting scientist at Royal Institute of Technology, Stockholm, Sweden |
| May – June 2002 | Visiting scientist at Royal Institute of Technology, Stockholm, Sweden |
| March – April 2003 | Visiting scientist at Royal Institute of Technology, Stockholm, Sweden |
| April – June 2004 | Visiting scientist at Royal Institute of Technology, Stockholm, Sweden |
| October-November 2005 | Visiting scientist at Risø National Laboratory, Denmark |

| | |
|---------------------|---|
| February 2008 | Visiting Scientist at Max-Planck Institut für Plasmaphysik, Garching, Germany |
| May 2009 | Visiting Scientist at Max-Planck Institut für Plasmaphysik, Garching, Germany |
| November 2009 | Visiting Scientist at Centre der Recherches en Physique des Plasmas, EPFL, Lausanne |
| March 2011 | Visiting scientist at Royal Institute of Technology, Stockholm, Sweden |
| April 2011 | Visiting scientist at the National Fusion Laboratory, CIEMAT, Madrid |
| May 2011 | Visiting Scientist at Max-Planck Institut für Plasmaphysik, Garching, Germany |
| February-March 2012 | Visiting Scientist at Culham Centre for Fusion Energy, Oxford, JET |
| July-September 2013 | Visiting Scientist at Culham Centre for Fusion Energy, Oxford, JET |
| May 2014 | Visiting Scientist at Max-Planck Institut für Plasmaphysik, Garching, Germany |
| July 2014 | Visiting Scientist at Culham Centre for Fusion Energy, Oxford, JET |

Invited Lectures

| | |
|-----------|--|
| July 2012 | Invited lecture at the <i>Workshop on Electric Field, Turbulence Self Organization in Magnetized Plasmas</i> , Stockholm, Sweden |
| Title | <i>The role of 3D fields on edge and SOL turbulence</i> |
| July 2012 | Invited lecture at the <i>41st EPS Conference in Plasma Physics</i> , Berlin, Germany |
| Title | <i>Magnetic perturbation as a viable tool for edge turbulence modification</i> |

Competition and Habilitation

| | |
|-------------------|--|
| May 2009 | Public selection (Ref.364/12) held by Consiglio Nazionale delle Ricerche, for research position |
| Advisor Committee | Prof. A. Fasoli, Ecole Polytechnique Federale de Lausanne, Switzerland Dr. V. Antoni, Consiglio Nazionale delle Ricerche, Istituto Gas Ionizzati, Padova Dr. D. Farina, Consiglio Nazionale delle Ricerche, Istituto di Fisica del Plasma, Milano |
| Result | The competition included written exams and oral colloquium. The candidate resulted the winner of the competition with a final mark of 104.5/120 |
| 2012 | Abilitazione Scientifica Nazionale (ASN National Scientific Habilitation). Public evaluation of the competences and scientific achievements to obtain the qualification of <i>Professore Associato</i> (Associate Professor) in Experimental Physics and Material Science |
| Advisor Committee | Prof. Mattera Lorenzo, Università degli Studi di Genova, Italy Prof. Rinaldo Cubeddu, Politecnico di Milano, Italy Prof. Stefano Nannarone, Università degli Studi di Modena e Reggio Emilia, Italy Prof. Mobilio Settimio, Università degli Studi di Roma Tre, Italy Prof. Andrea Cavalleri, Max Planck Institute for the Structure and Dynamics of Matter, Hamburg |
| Grade | Excellent |

IT skills

| | |
|-------------------|--|
| Operating systems | Linux, Unix, Mac OSX, Windows, Open VMS |
| Programming | IDL (Interactive Data Language), Python/NumPy/SciPy, GIT Version Control, Bash |
| Office | Microsoft Office, iWork, L ^A T _E X, web, emails |
| Design | Adobe InDesign, Adobe Illustrator |

Technical Skills and Interest

| | |
|------------|---|
| Areas | Data analysis and Interpretation including advanced statistical tools for turbulent signals |
| Technicals | Competences in electrostatic and magnetic plasma diagnostic, competences in UHV technology, competences MDSplus technology for data acquisition |

Duties and Responsibilities

- 2007–2015 Responsible Scientist for edge manipulators in RFX-mod device. Responsibilities implies the maintenance and improvement of the two manipulators used in RFX-mod for the insertion of edge probes and the development of new probe heads with the coordination between design, mechanical and diagnostic technicians.
- 2015– Responsible Scientist Soft X ray diagnostic in the TCV tokamak. Deputy Responsible Scientist for the Neutral Beam Heating system in the TCV tokamak.
- 2009 Task force leader in RFX-mod experiment for task force *Particle, Momentum and energy transport*. The task force was in charge to implement experimental proposals aimed to the comprehension of physical mechanisms which regulate particle momentum and energy transport in RFX-mod. The task force leaders together with the Scientific Coordinators take part to the decision processes concerning the experimental program of the machine, deciding priorities and objectives
- 2010 Task force leader in RFX-mod experiment for task force *Physics integration for high performance RFP*. The task force aimed to coordinate all the efforts devoted to the comprehension of the physical mechanism behind the appearance of improved confinement regimes in RFX-mod, to establish the physical requirement for a controlled achievement of h-mode confinement regime and to explore all the still open basic physics issues whose knowledge could help to improve plasma performances. As in the previous year the task force leaders take part to the scientific program schedule, coordinating in particular the activities for the high current performance operations.
- 2011 Coordinator of the EFDA working group *3D field effects in edge and SOL and diagnostic development* under EFDA Transport Topical Group. This working group has been established to coordinate the effort promoted by different EFDA associations on the following subject:
1. Investigation on the effect of non-axisymmetric fields on the filamentary structures (L and H-mode regimes)
 2. Investigation into changes in edge transport due to the application of 3D fields
 3. Characterization of the edge turbulence in these 3D situations (including effect of ion temperature and 3D fast particle losses)
 4. Edge turbulence and transport modelling by incorporating 3D field effects into the codes.
 5. Comparison studies between tokamaks, stellarators and RFPs on the above topics.
- The coordinators promote exchange of results between different association and the definition of common objectives which facilitate the comparison between different devices.
- 2012 Member of the Program committee of the 17th Joint EU-US Transport Task Force Meeting in combination with the 4th EFDA Transport Topical Group meeting, 3-6 September 2012, Padova, Italy
- 2013 Scientific Coordinator of experiment *B13-19 Investigation of M-Mode* on JET Tokamak campaigns C31-C34. Coordination implies assigning activities to the experimental team, plan the possible experimental campaign to be designed in collaboration with Session leaders, establish scientific objectives and monitoring scientific activities.
- 2014 Scientific Coordinator of experiment *AUG14-2.2-3, SOL filamentary transport at high density*, under the MST1 Eurofusion Work-Packages
- 2015 Scientific Coordinator of experiment *TCV15-2.2-3: Filamentary Transport in the SOL* under MST1 Eurofusion Work-Package
- 2015 Scientific Coordinator of experiment *TCV15-1.5-1, Mitigation of high Z impurity accumulation through combined central ECRH and tailoring of MHD activity in high performance H-modes* under MST1 Eurofusion Work-Package

Teaching

| | |
|-----------|---|
| 2008–2009 | Assistant for the course <i>Fluid and Plasma Physics</i> , Department of Physics, University of Padova |
| 2010 | Assistant for the course <i>Fluid and Plasma Physics</i> , Department of Physics, University of Padova |
| 2011–2012 | Assistant to the course <i>Fundamental of Plasma Physics</i> , Department of Physics, University of Padova |
| 2012–2013 | Assistant to the course <i>Fundamental of Plasma Physics</i> , Department of Physics, University of Padova |
| 2013–2014 | Assistant to the course <i>Fundamental of Plasma Physics</i> , Department of Physics, University of Padova |
| 2013–2014 | Lecturer for basic Physics course of the Joint Research Doctorate and European Interuniversity Doctoral Network on Fusion Science and Engineering |
| 2014–2015 | Assistant to the course <i>Fundamental of Plasma Physics</i> , Department of Physics, University of Padova |

Supervising

| | |
|------|---|
| 2007 | Supervisor for Bachelor Thesis, Department of Physics, University of Padova, candidate: A. Scaggion |
| 2009 | Supervisor for M.Sci. Thesis, Department of Physics, University of Padova, candidate: A. Scaggion |
| 2011 | Supervisor for Bachelor Thesis, Department of Physics, University of Padova, candidate: A. Mazzi |
| 2013 | Supervisor for M.Sci. Thesis, Department of Physics, University of Padova, candidate: A. Mazzi |
| 2015 | Supervisor for PhD. Thesis, Department of Physics, University of Padova, candidate: C. Rea |

Publications

I've authored a total number of **100 Articles** in peer reviewed journal, **87 Conference proceedings** and personally presented **18 oral contributions**. The complete list of publications is available as a separate file.
h-index factor: **21** according to ISI Web of Knowledge (last update October 30, 2015)

Research Interest

I've been involved in fusion plasma science since my M.Sci. thesis in Physics in 1999. During these 16 years I've tried to expand as much as possible my personal research skills focusing in particular on collection, analysis, interpretation and modeling of experimental data collected in fusion oriented experiments (Reversed Field Pinches, Tokamaks and Stellarators), with particular emphasis on the comparison with theoretical and numerical results. Main research subjects may be summarized as follow:

- (a) Electromagnetic turbulence induced transport:** with emphasis on anomalous transport studies induced by different source of turbulence: electrostatic as Drift-induced or interchange induced transport, or electromagnetic including the role of magnetic flutter fluxes in the mechanism of particle and energy losses
- (b) Statistical analysis of plasma turbulence:** the topic allowed me to get confident with advanced statistical tool (as Wavelet Transforms, Local Intermittency Measurements, Waiting Time distribution) and with dynamical system model as Self-Organized Criticality (SOC) systems, shell-models
- (c) Blobs and ELM filaments:** non linear coherent structures arising as a non-linear evolution of plasma instabilities have been experimentally investigated. The research includes studies on the generation and evolution of these structures including their parallel dynamics with emphasis on turbulent *blobs* and ELM *filaments*
- (d) Sheared flow generation:** Non linear interaction between turbulence and sheared flows including experimental investigation of the role of Maxwell and Reynolds stress in the momentum generation of edge flow

(e) Magnetic topology and its relation with plasma flow: with emphasis on the effect of non-axisymmetric magnetic field perturbation on kinetic properties of the plasma, as plasma flow, ambipolar electric field and Plasma Wall Interaction

(f) Beam plasma interaction: with emphasis on Alfvén instabilities, Energetic Particle Driven instabilities, and turbulent transport of energetic ions

Among the results the following should be highlighted:

- i First experimental proof of non applicability of *Self Organized Criticality* paradigm to edge plasma turbulence [A2, A1]
- ii First experimental evidence of non-linear generation of edge flow in Reversed Field Pinches through Reynolds stress mechanism [A4, A3]
- iii First experimental measurements of parallel current associated to coherent structures in a fusion relevant plasma [A6]
- iv First experimental evidence of the existence of a particular class of coherent structure, named *Drift-Kinetic Alfvén vortices*, arising because of the non linear coupling of Drift and Kinetic Alfvén waves in a laboratory plasma [A7]. This type of structure has been previously detected in the magnetosphere
- v First experimental estimate of parallel current associated to Edge Localized Modes filament [A9]
- vi First experimental measurements of 2D current distribution associated to plasma blobs [A8]
- vii Experimental evidence of transition towards helical states in high current Reversed Field Pinch operation [A5] and its consequence on edge ambipolarity [A10]
- viii Experimental investigation on the role of *blobs* in the formation of the so-called *shoulder* in density gradient in high density regime [A11]

In all my carrier I've always tried to conjugate a strong experimental insight on the data collection, participating in all the experimental activities mandatory in order to obtain useful experimental results, and a rigorous theoretical approach in the data analysis and interpretation, using theories and numerical tools as a framework to understand real plasma signals. This approach helped me to build a bridge between theories and experiments, a necessary effort in order to understand complex plasma dynamics.
